

Daikin's award-winning controller Madoka Plus now available in Europe

Brussels, XX July 2026 – Daikin is officially launching its next-generation controller Madoka Plus for commercial applications. Following its debut at the Climatización y Refrigeración trade fair in Madrid last November, the Good Design Award-winning controller is now available across Europe, bringing intuitive touchscreen control and elegant design to commercial spaces such as hotels, offices and retail outlets. Madoka Plus also offers an ecosystem of intelligent sensors that detect temperature, humidity, CO₂ levels & motion, as well as sensors for doors and windows.

Effortless control, designed around users

Madoka Plus puts simplicity first, with an intuitive, touch-based user experience that makes daily operation effortless. Through simple navigation using taps and swipes, users benefit from fast access to key settings, real-time feedback and clear visual guidance through colours, icons and animations.

The wide, colour touchscreen and streamlined interface provide immediate clarity, allowing users to view temperature, mode and airflow settings at a glance. Multi-language support ensures accessibility across diverse environments, making Madoka Plus particularly suited to international commercial applications. The result is intuitive, faster and effortless daily climate control across hotels, offices, retail spaces and other commercial settings, making it easy for anyone to operate.

Award-winning design

Recognised with a Good Design Award 2025 for its premium aesthetics and user-centric design, Madoka Plus combines form and function in a compact 86×86 mm glass format available in timeless black or white to blend seamlessly into modern interiors.

Easy-to-activate energy saving functions

Beyond its looks, Madoka Plus has been built to save energy. Easy-to-activate energy-saving functions are complemented by an optional range of Madoka Plus intelligent and wireless sensors. It is an ecosystem of sensors enabling advanced monitoring and automated control. These sensors – including a Door & Window sensor, Motion sensor, Temperature & Humidity sensor and CO₂ sensor – communicate directly with the controller, providing real-time data on room conditions.

Using this data, users can create interlocking logic via the refreshed Madoka Assistant app. This enables automated and predefined actions such as:

- Adjusting temperature based on occupancy
- Switching off systems when windows are open
- Activating dry mode in high humidity
- Optimising ventilation based on CO₂ levels

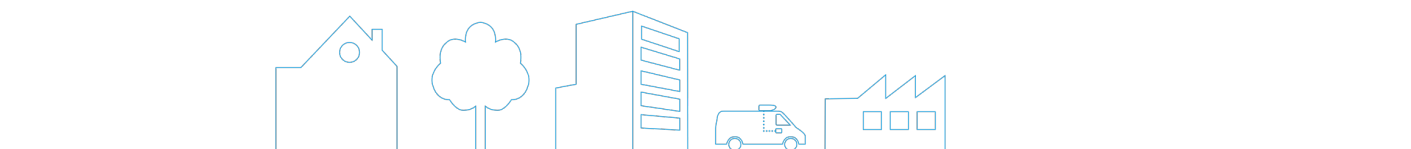

Built with installers in mind

Developed based on extensive installer feedback, Madoka Plus speeds up service tasks through intuitive touchscreen navigation and fast commissioning. Built-in diagnostics, including last error history and operational parameters, make troubleshooting easier and reduce on-site time and callbacks.

Madoka Plus was designed and developed at Daikin Europe's new R&D facility in Ghent, Belgium. Backed by Daikin's proven HVAC expertise and reliability, Madoka Plus marks the next evolution in Daikin's control solutions for commercial applications and is available across Europe from July 2026.

About Daikin Europe N.V.

The Daikin Europe Group is a leading provider of heating, cooling, ventilation, air purification and refrigeration (HVAC-R) technology in Europe, the Middle East, and North Africa. It serves a diverse customer

base across the region by designing, manufacturing and marketing a wide range of products, maintenance services and turnkey solutions for residential, commercial and industrial applications. The company employs more than 14,200 people through 57 subsidiaries and operates 15 manufacturing sites in Europe (12), Turkey (1) and the Middle East (2). Daikin's refrigeration products are available under the Daikin, Tewis, Zanotti, Hubbard, and AHT brands. Headquartered in Ostend, Belgium, for over 50 years, the Daikin Europe group is a subsidiary of the global group Daikin Industries.

About Daikin Industries Ltd.

Daikin Industries is a global leader in heat pump, air conditioning and air filtration technology. The company employs more than 104,000 people worldwide. Founded in Osaka in 1924, it is the only manufacturer in the world that develops and manufactures heating, ventilation, air conditioning, and refrigeration equipment, as well as compressors and refrigerants in-house. Daikin was named one of the world's top 100 innovative companies by Clarivate (UK) and LexisNexis (USA), recognised for its leadership in technology research and intellectual property patents. For its fiscal year 2025 (1 April 2025 – 31 March 2026), Daikin reported record-high sales of 5.02 trillion yen (28.66 billion euros at reporting rate).
